

A healthy immune system is the basis of good health

As a health professional, you understand how important maintaining a healthy immune system is for your patients. An out of balance immune system is a green light for disease and infection. A healthy balanced immune system, on the other hand, provides the best prophylaxis against illness. When patients have an unbalanced immune system that is not operating at optimal levels, they need the help that Viralox can provide, especially in cases where a vaccine is not available. Viralox Health Spray with Lactopeptides™ provides that help.

Viralox Health Spray is a natural solution that is safe and easy to use

PRP's and Lactoferrin from colostrum are completely safe and have no known side effects. In addition, the spray is easy and fun for children to use with no pills or bad tasting liquid to swallow. Just two or three squirts into the mouth three times a day delivers an effective dose. Since it is a nutritional supplement, no prescription is required, and its cost is low enough for nearly any family to afford.

Give your patients the extra protection they need against viruses and other pathogens. Recommend Viralox® Health Spray.

The Best Offense is a Great Defense

Viralox®

Viralox® Health Spray — Broad spectrum anti-viral support†

Physician Brochure

How does Viralox[®] help protect against viruses?

Among the many pathogens that pose a threat to our well-being, viruses are preeminent. Not only do they cause some of the worst diseases and infections known to man – from AIDS to cancer, hemorrhagic fever to avian flu – but they are the most difficult to treat. There are numerous antibiotics and other drugs that are very effective against bacteria, fungi and protozoan parasites, yet very few that are effective against viruses. Many viruses have no known treatment. But that does not mean there are no ways of protecting against viruses.

The Lactopeptide in Viralox contains Proline-Rich Polypeptides (PRP's) and Lactoferrin. Both have extensive scientific literature that proves they are effective virus fighters.

PRP's main mechanism of action is to support immune functioning, stimulating it when it is performing at sub-par levels and suppressing it when it is overactive. A smoothly running immune system is vital to combat viral infections.

Lactoferrin is a part of the body's innate, non-specific immune system that helps the body combat pathogens of all varieties. Lactoferrin has been shown to be effective against a wide variety of viruses. It utilizes a number of mechanisms to accomplish this, principally blocking the entry of viruses into target cells by competing for binding sites on the cells or by binding to viral proteins to inactivate them so that macrophages and other scavenger cells can dispose of them. It also acts as an immune modulator to help stimulate the immune system to respond to infections.

After twelve years of development and clinical trials, Viralox is available to medical practitioners for use with patient protocols.

To prove the effectiveness of Viralox, stage three and stage four trials were conducted with the supervision of the WHO on late stage HIV patients. The results have been impressive, with normal level CD4 counts and elimination of viral load in blood samples in all the participants that remained compliant with protocols.

The active ingredient in Viralox, Lactopeptide, is a proprietary combination of PRP's and Lactoferrin peptides. This unique bioactive combination in peptide form absorbs readily into the blood stream via a simple oral spray delivery and is available for all ages.

Lactopeptide function provides a unique combination of benefits:

- Viralox increases NK cells' activity from 10-12 lytic units to 220-240 over a 200% increase. This is five times higher than any other product tested. This is important in infectious diseases particularly as Lymphocytes and NK cells are typically suppressed in these conditions. Viralox™ can help restore the normal balance of these cells, even in AIDS patients with suppressed immune systems. NK cells in our immune system are responsible for the removal of infected and abnormal cells.
- Balances immune function as a true immune modulator. Viralox regulates cytokine production to normalize inflammatory response depending upon the situation. It can suppress an overactive immune response and stimulate an under-responsive process.
- Promotes T-lymphocyte production stimulating them to become either helper T-cells or suppressor T-cells.
- Produces immunity to viruses. Viralox assists Helper T-cells promote the growth and activation of B-lymphocytes that produce antibodies to any virus or other pathogen present.
- Activates memory cells to shorten response time, if additional attacks occur.
- Stimulates the production of tumor necrosis factor-alpha (TNF-A) and Interferon gamma (INF-γ), as well as a number of other important cytokines. Promotes proliferation of Leukocytes (white blood cells).

- Effective against viruses known to have caused autoimmune diseases.
- Clinically proven to increase T-cell count to normal or near normal in AIDS patients.
- PRP's activate and control the production of cytokines and can help reduce the over production of cytokines associated with the Avian (Bird Flu) virus.
- Blocks viral cell binding sites preventing infection and reducing viral replication.
- Clinically shown to be effective against a wide range of viruses including Herpes, HIV, Influenza, Human Papilloma, Rotavirus, Polio, Adenovirus, Hepatitis C, Hanta, Respiratory Syncytial, Alpha viruses such as Semliki Forest and Sindbis, and Enteroviruses such as ECHO and Enterovirus-71, Epstein Bar, and Cytomegalovirus.
- Helps the immune system to adapt to viral mutations.
- Effective against a broad range of other pathogens: bacterial, yeast, and fungal.

Living in today's world requires a strong immune system

As we enter the third millennium, medicine is being confronted by new and more virulent forms of infectious disease that have adapted to resist current treatments. Increasing levels of pollution and toxins in the environment weaken our immune systems making us unable to defend ourselves against these viruses.

Daily nutritional supplementation with Viralox Health Spray can help modulate or balance the immune system to help us better deal with challenges that disrupt the homeostasis of the system. Viralox provides the unique support needed to survive viral and other infections for which there is no other effective defense. It helps the body heal itself by supporting its own natural defenses. The effectiveness of its compounds has been proven in hundreds of clinical and scientific studies published in peer reviewed journals.
